> TIMELINE

Explanation

- **Challenges:** This task was fairly straightforward, as I was able to follow the guidelines of the assignment. However, I did run into some trouble in changing the color of the list elements as I wasn't expecting to be under the "ol" tag in CSS

Task 2

A screenshot of a code editor window titled "environ.css". The file contains the following CSS code:

```
1 body {
2     h1, p {color: #rgb(161, 244, 161)}
3     background-image: url('shreksswamp.png');
4     background-repeat: no-repeat;
5     #shrek {width: 200px;}
6 }
```

A screenshot of a code editor window titled "environ.html". The file contains the following HTML code:

```
1 <!doctype html>
2 <html xmlns="http://www.w3.org/1999/xhtml" lang="en-EN">
3
4     <head>
5         <title>shrek's swamp</title>
6         <link href="environ.css" rel="stylesheet" type="text/css" />
7     </head>
8
9     <body>
10        <h1> WHAT ARE YE DOIN IN ME SWAMP!!! </h1>
11        <p><strong> ITS ME! SHREK! GET OUT ME SWAMP!!</strong></p>
12        
13    </body>
```

Explanation

- **Thought Process:** When given the creative freedom to choose the theming for this assignment, I knew I wanted to do something wacky. The first thing that came to mind when imagining an “environment” was Shrek’s Swamp, so that’s what I made.
- **Challenges:** The main challenge that I ran into in this assignment was the fact that I didn’t insert the header that links to the right css file at the start. This meant that any work I did in the css file had no effect. It was quite the headache. I stumbled across the solution by copying the header from the index.html file, which instantly applied the css effects from site.css to the environ file. I was able to work backwards from there. It was really exciting to be able to solve that puzzle.
